

Probability and Statistics-Solution Q1

Section A and B

SAMPLE-1

Order the data values from smallest to largest:

31, 38, 39, 39, 42, 42, 45, 47, 48, 48, 48, 52, 52, 53, 54, 55, 57, 59, 60, 61, 64, 64, 66, 66, 67, 68, 68, 69, 71, 71, 74, 75, 77, 79, 79

$$M=Q_2=59.5, \quad Q_1=48, \quad Q_3=68.5$$

The interquartile range IQR is the difference of the third and first quartile:

$$IQR=Q_3-Q_1=20.5$$

The five-number summary consists of the minimum, first quartile, median, third quartile and maximum.

Minimum: 31

Q_1 : 48

M : 59.5

Q_3 : 68.5

Maximum: 79

Outliers are observations that are more than upper and less than lower limit.

$$\text{Upper limit} = Q_3 + 1.5IQR = 68.5 + 1.5(20.5) = 99.25$$

$$\text{Lower limit} = Q_1 - 1.5IQR = 48 - 1.5(20.5) = 17.25$$

There are no outliers, because all data values in the sample are between 17.25 and 99.25.

$$\text{Coefficient of variation} = C.V(\%) = (SD / \text{Mean})100$$

$$\text{Coefficient of skewness} = (\text{mean-mode})/SD = 3(\text{mean-median})/SD$$

Probability and Statistics-Solution Q1

Section A and B

SAMPLE-2

Sort the data set:

3.3, 8.7, 9.6, 10.7, 11.3, 11.6, 11.9, 12.2, 13.2, 13.3, 13.6, 14.8, 15, 15.7, 16.7

$$IQR = Q_3 - Q_1 = 14.2 - 11.0 = 3.2$$

The five-number summary is the minimum, first quartile, second quartile, third quartile and maximum:

Minimum: 3.3

Q_1 : 11.0

Q_2 : 12.2

Q_3 : 14.2

Maximum: 16.7

An outlier is more than 1.5 IQR's greater than Q_3 or less than Q_1 .

$$\text{Upper limit} = Q_3 + 1.5IQR = 14.2 + 1.5(3.2) = 19$$

$$\text{Lower limit} = Q_1 - 1.5IQR = 11.0 - 1.5(3.2) = 6.2$$

Thus 3.3 is an outlier

$$\text{Coefficient of variation} = C.V(\%) = (SD / \text{Mean})100$$

$$\text{Coefficient of skewness} = (\text{mean-mode})/SD = 3(\text{mean-median})/SD$$

Probability and Statistics-Solution Q1

Section C

Q1

There is no outlier

Q2

$$\bar{x} = \frac{\sum xf}{n} = \frac{2720}{40} = 68$$

$x - \bar{x}$	$(x - \bar{x})^2$	$(x - \bar{x})^2 f$
$34.5 - 68 = -33.5$	$(-33.5)^2 = 1122.25$	$1122.25 * 3 = 3366.75$
$44.5 - 68 = -23.5$	$(-23.5)^2 = 552.25$	$552.25 * 1 = 552.25$
$54.5 - 68 = -13.5$	$(-13.5)^2 = 182.25$	$182.25 * 8 = 1458$
$64.5 - 68 = 3.5$	$3.5^2 = 12.25$	$12.25 * 10 = 122.5$
$74.5 - 68 = 6.5$	$6.5^2 = 42.25$	$42.25 * 7 = 295.75$
$84.5 - 68 = 16.5$	$16.5^2 = 272.25$	$272.25 * 7 = 1905.75$
$94.5 - 68 = 26.5$	$26.5^2 = 702.25$	$702.25 * 4 = 2809$

$$s = \sqrt{\frac{\sum (x - \bar{x})^2 f}{n - 1}} \approx 16.4$$

OGIVE curve

NOTE: little variation in answers are possible, method and steps are important.
