

Introduction

By: Syed Azhar

Why I am Teaching

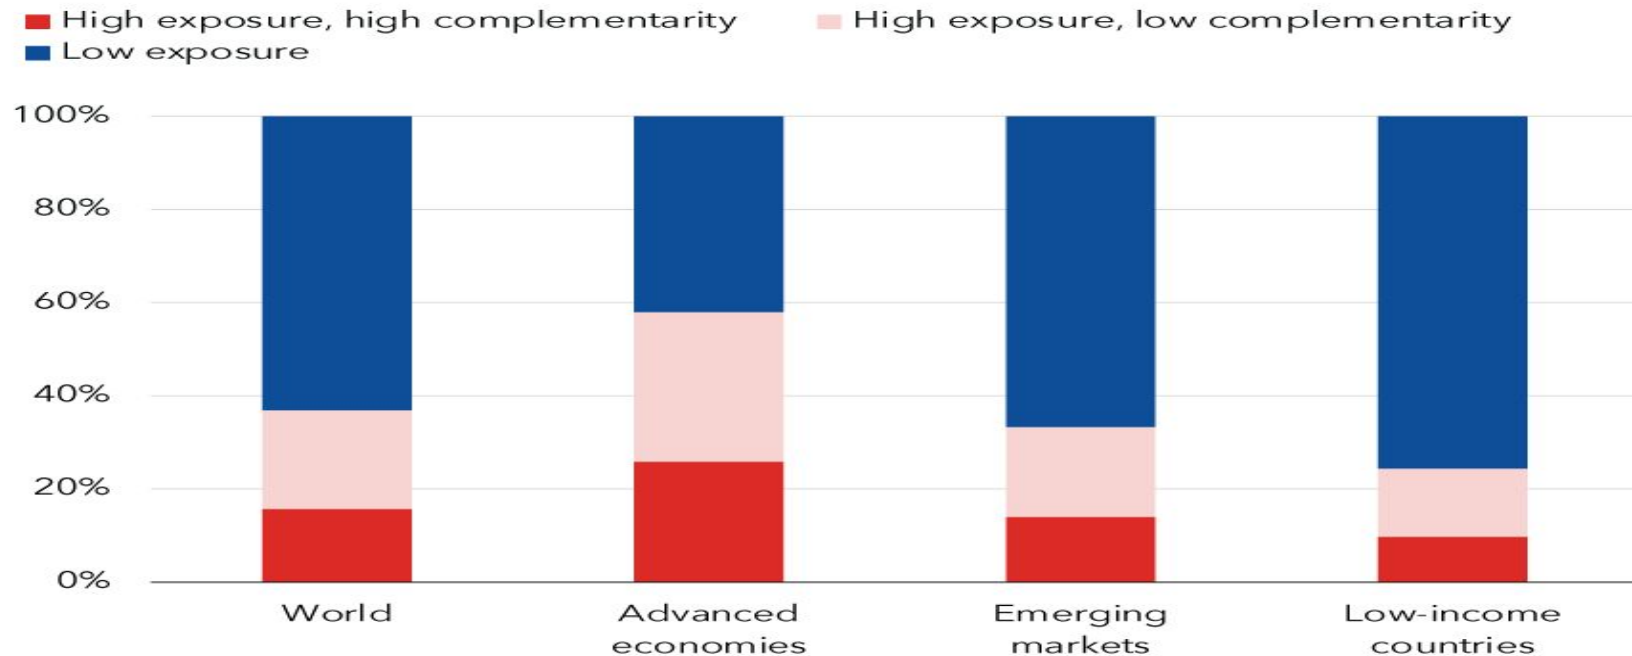

From Programing - Automation - DevOps - MLOPS

An IMF report concluded that
40% of jobs around the world
will be affected by AI

AI's impact on jobs

Most jobs are exposed to AI in advanced economies, with smaller shares in emerging markets and low-income countries.

Employment shares by AI exposure and complementarity

Source: International Labour Organization (ILO) and IMF staff calculations

Note: Share of employment within each country group is calculated as the working-age-population-weighted average.

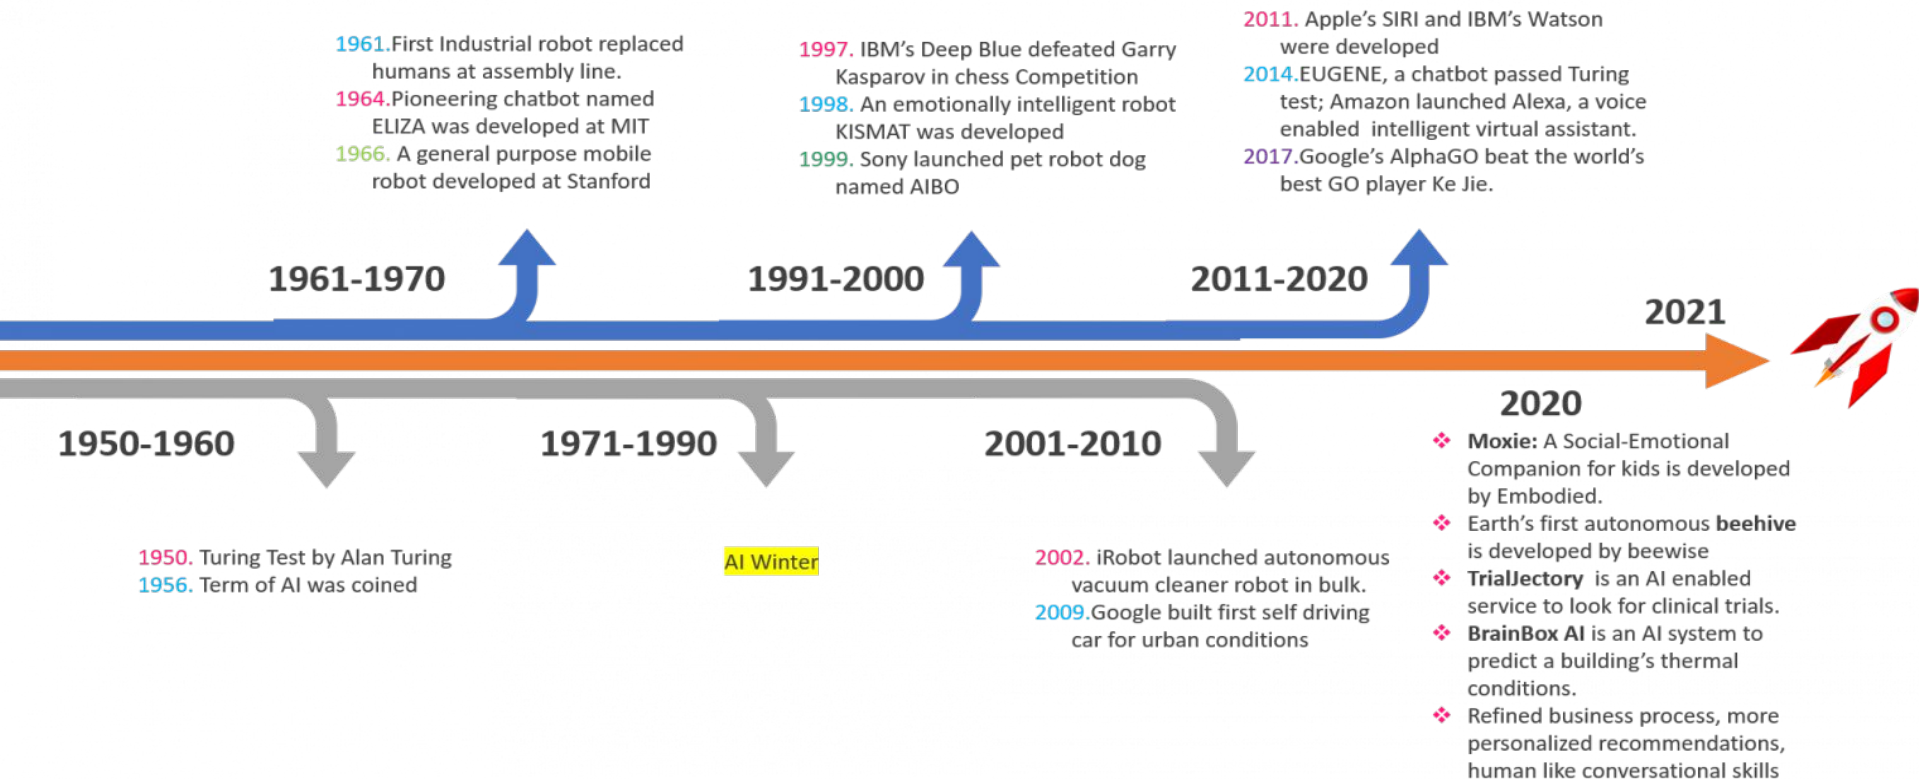

Evolution of the Computer

A week of computing time on a modern laptop would take *longer than the age of the universe* on the 7090.

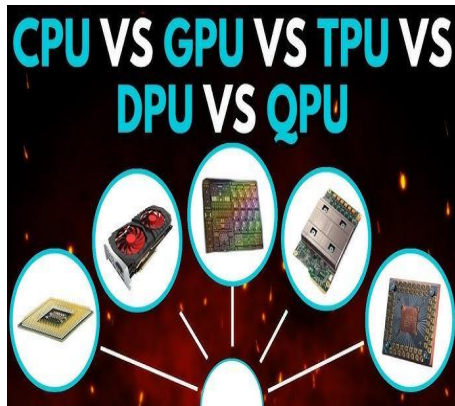

[GPT-3](#). Executing them on cloud servers took the equivalent of 355 years of laptop time, which translates to more than 36 million years on the 7090. You'd need a *lot* of coffee as you waited for that job to finish.

The Age of Disruption: Data Science & AI at the Forefront

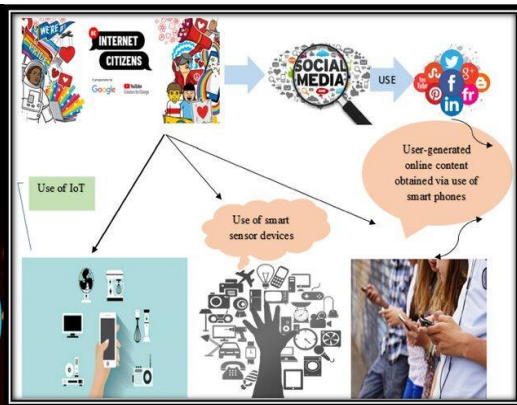

Why the Hype?

Processing Power

Data Availability

Open Source

AI Models

Cloud and Edge

Computing

AI is the new electricity

Introduce yourself

Why you are here?

What do you want to achieve?

What Excite you the most?

**Are DevOps Teams & Engineering
Managers Really Buying into the
AI frenzy?**

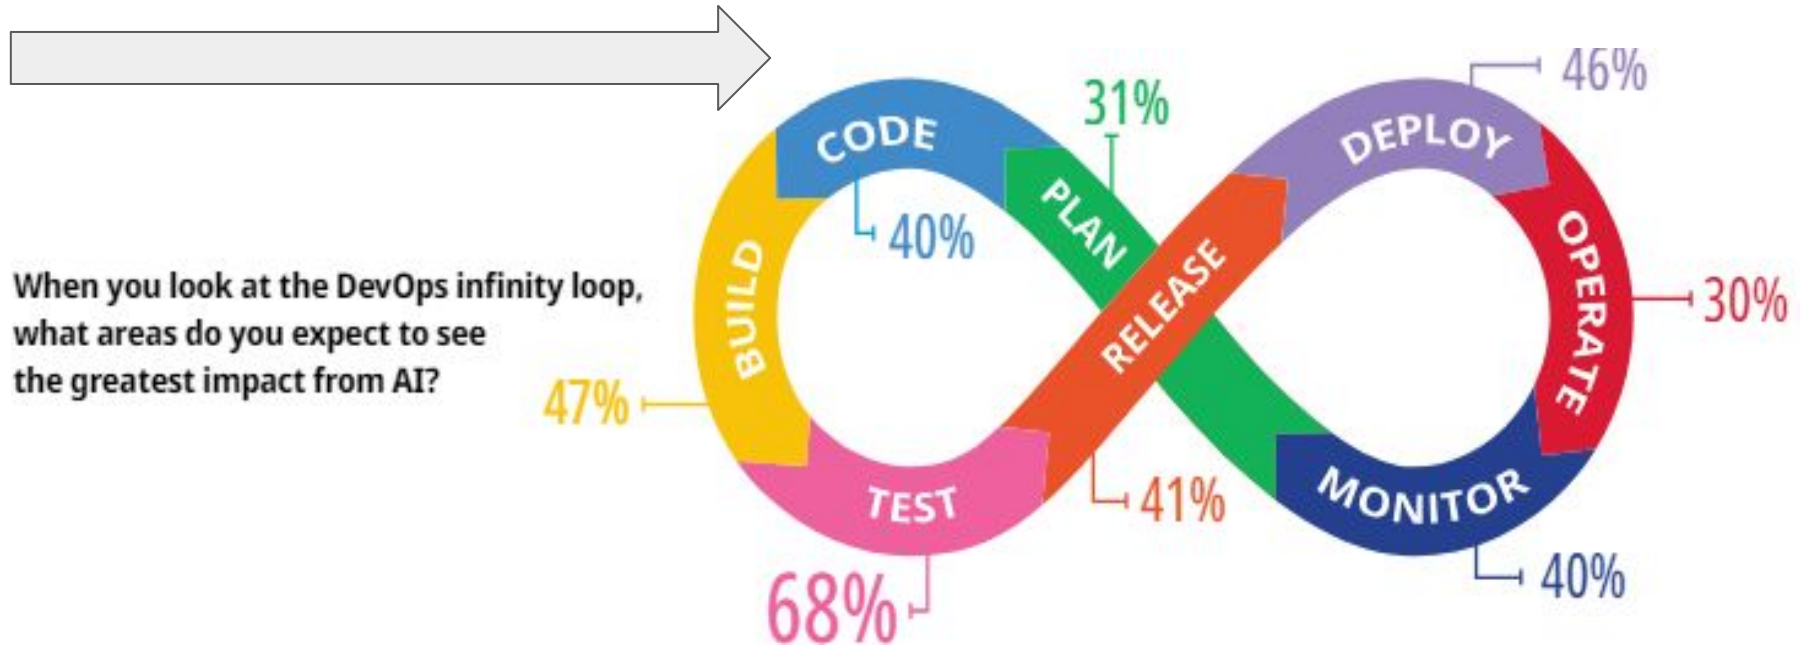

AI is not here to replace but to augment DevOps

- 24% have already knitted AI deep into their [DevOps processes](#)
- 31% of engineering teams make use of AI/ML technologies for effective [code review](#)
- 37% already use AI/ML for software testing. The numbers are estimated to double up in a year or two
- 51% of engineering teams make use of AI/ML to check code hygiene
- 62% of organizations are already practicing [ModelOps](#) — *DevOps for machine learning models lifecycle management.*

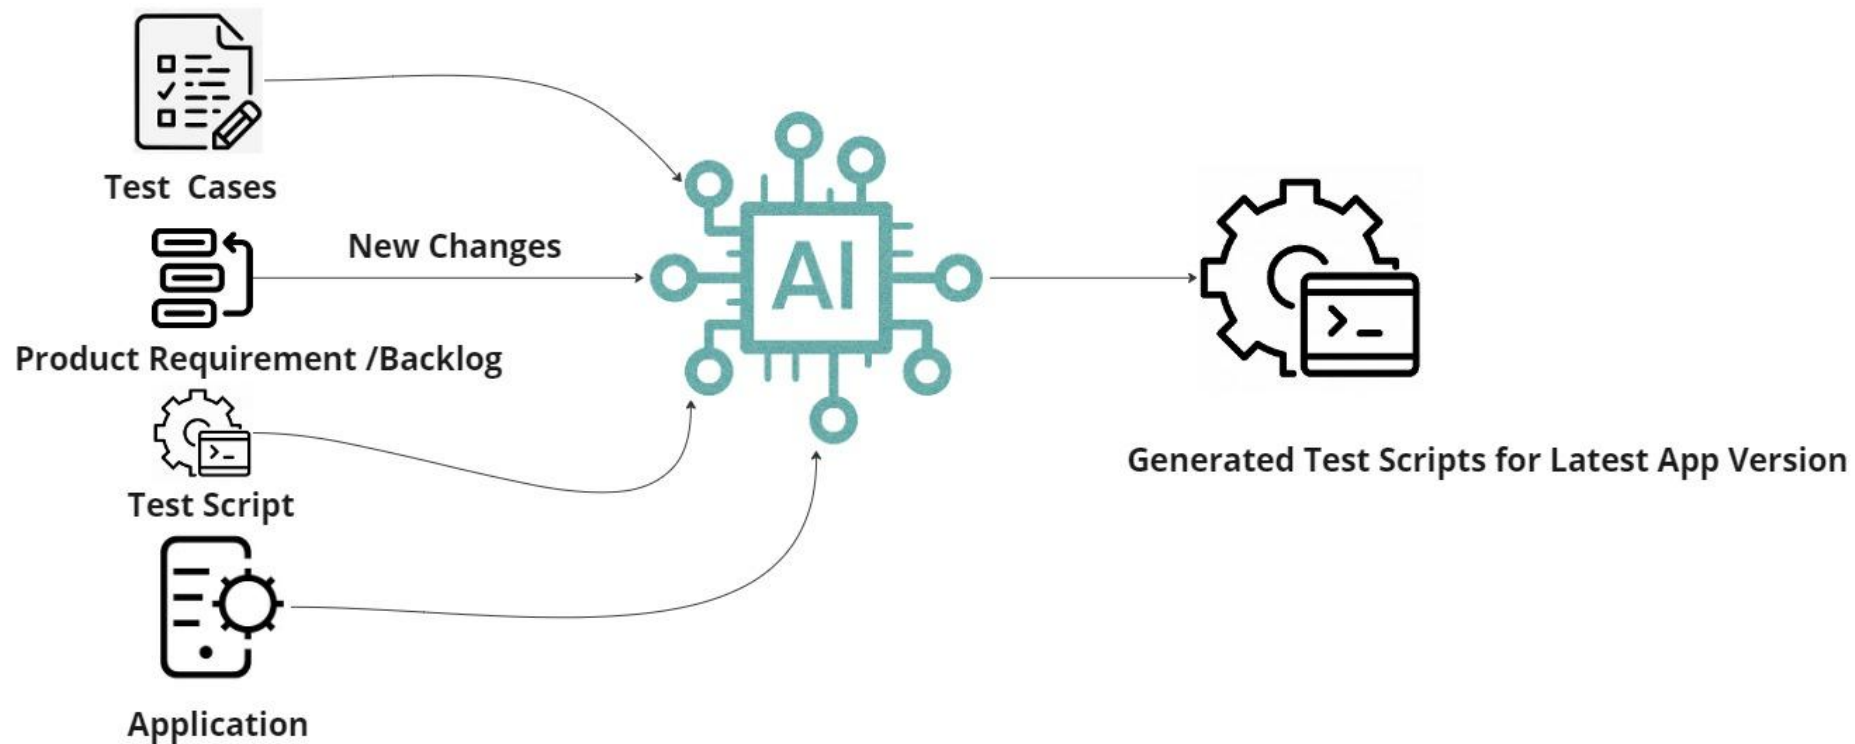

DevOps Use Cases

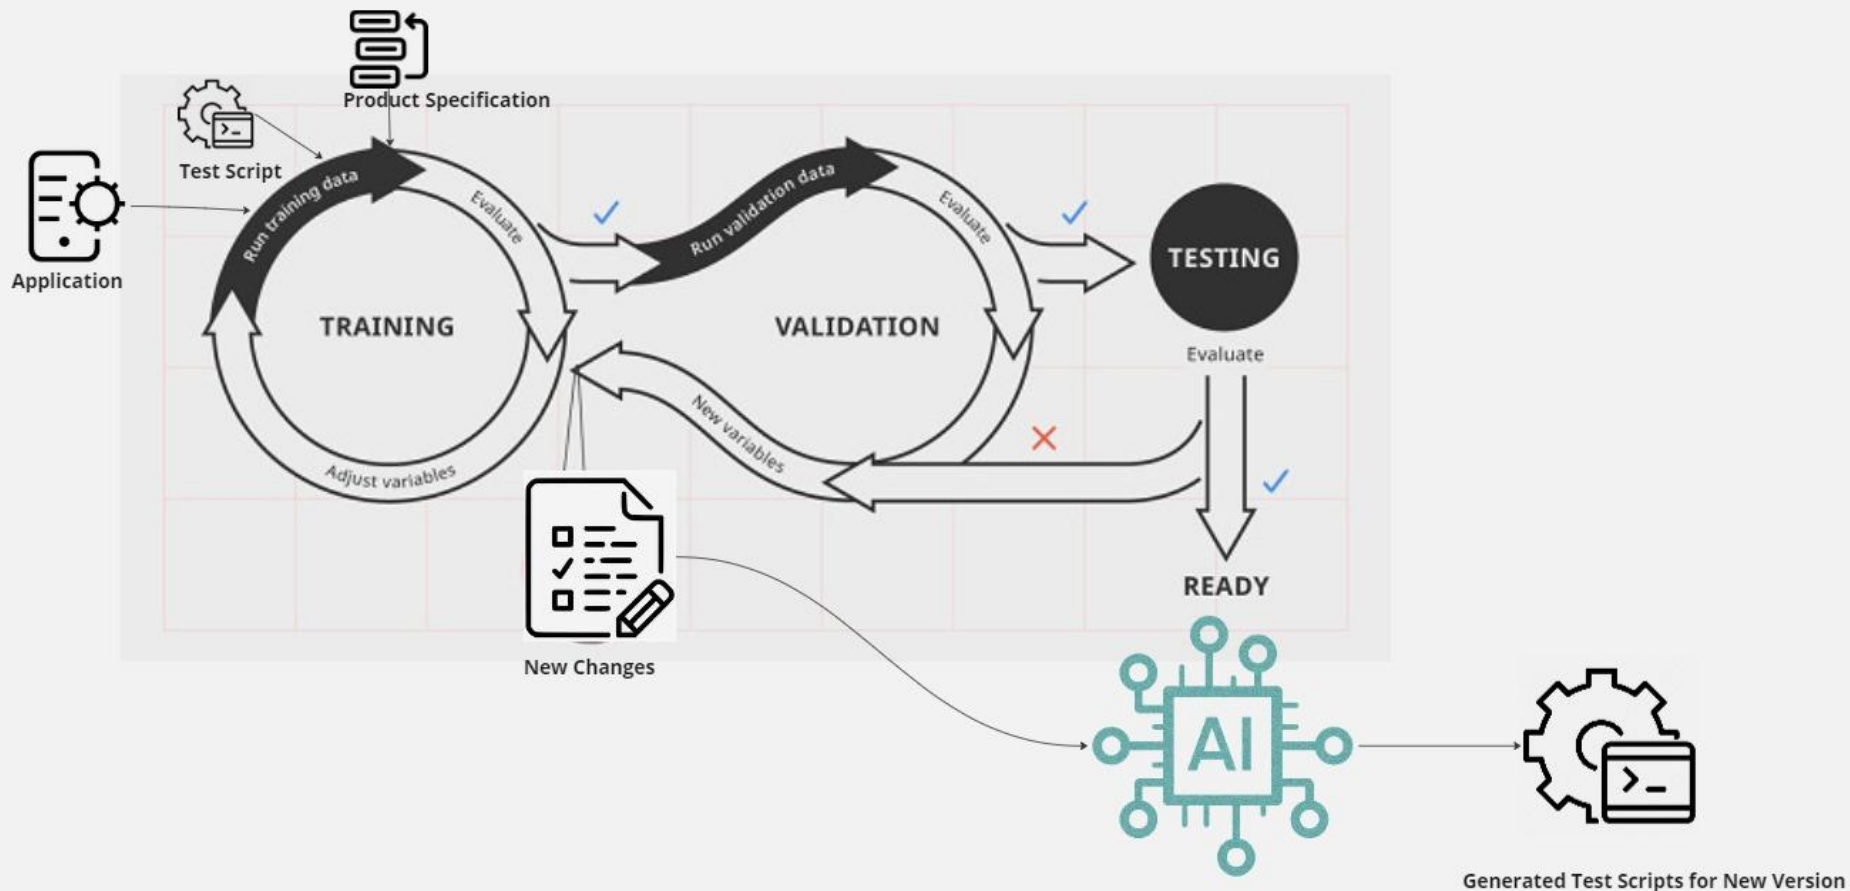

- Enhanced Automation
- Predictive Analytics
- Continuous Integration and Delivery (CI/CD)
- Intelligent Resource Management
- Enhanced Security
- Intelligent Incident Response
- Data-Driven Decision Making
- Scalable Infrastructure Management
- Facilitated Collaboration
- Continuous Learning and Improvement
- Code Generation and Learning

AI's Greatest Potential is in Functional Regression Testing
